

Short Wave Diathermy | Now 50 Euros| Dublin Vitality Center | Blanchardstown Village | Dublin
info@dublinvitalitycenter.com Tel 01-8201602

Short wave diathermy involves the passage of a high frequency current at alternative levels over the area of the skin which requires treatment. The local concentration of current passes through the skin and renders the broken vessel underneath obsolete. Essentially, it blocks the flow of blood into the capillary and thus it fades away instantly. At Dublin Vitality Center, the method of Diathermy is short wave blend. This means that it combines a cutting waveform with coagulation to allow greater haemostasis during cutting.

Broken Thread Veins, Capillaries | Red Veins | Face

The presence of broken veins and capillaries are one of the very notable and stressful signs of aging. Over the years and through various lifestyle indications, these small red veins become apparent especially around the nose and cheeks. Women can cover them with makeup but they are still noticeable. Men do not have this option.

The correct name for these is facial telangectasia. They are also known as blood spots, spider veins, broken veins, broken capillaries, red veins and thread veins. Whatever the name they are treated effectively with short wave Diathermy at Dublin Vitality Center. Rarely will a client need a second treatment of Diathermy to treat the problem. In advanced cases, up to 5 treatments may be recommended. This is usually performed after microdermabrasion treatment leaving 2 weeks in-between. It is often done as an isolated treatment and is quite effective on its own.

Facial Broken Veins , Capillaries, Thread Veins

Short wave diathermy is the most effective treatment for spider or thread veins and broken capillaries on the face. Therefore results are almost guaranteed. What many people find surprising is that results are instant. Although you will need to take care of the skin and follow the aftercare advice exactly. A common sign of aging is the appearance of unsightly broken capillaries or thread veins around the nose. These can be removed in one treatment.

In this example here, the patient achieved this result after just 1 session of Diathermy.
